

totally bespoke designs using advanced engineering solutions

Oaksmere's skill at interpreting client requirements and translating that into detailed design has been key to our success. We work closely with others involved in the design process, whether they be companies or individuals.

Risk is minimised by incorporating Health & Safety and all other current legislative requirements into a scheme. We understand the importance of designs that maximise capital and increase revenue with optimum energy efficiency. Our solutions are characteristically proactive, progressive and explore new ideas and attitudes.

Clients can have confidence in our discretion to protect their business interests. We have safe and rapid communication paths for electronic design transfer to collaborative websites with total design traceability. Our intuitive design engineers use the latest software to assist in the selection of major equipment, components and services. The resulting detailed design enables clear costing through broad contractor tendering.

Key Strengths

- Consistent, reliable solutions
- Unbiased consultancy
- Contemporary schemes
- Site logistics-led design
- Friendly, professional, client liaison
- Technically adept design co-ordination
