

unbiased expertise to make sure your design will perform

Our senior engineers start by making sure we have a thorough understanding of your exact specifications. We then verify that the choice of all equipment is at its optimum for performance and value; and make cross-checks that materials, refrigeration units, plant support systems and layout match agreed rates and will be an effective long-term solution.

Our design database and experience offer you the chance to compare the suitability of your scheme against similar projects. It's also an opportunity to formulate extra ideas from our knowledge pool.

We offer sound, unbiased assessment with only your interests in mind, and we actually enjoy having our reputation for engineering excellence tested to the full.

Key Strengths

- Unbiased advice
- Thorough professional verification
- Economic benefits for the scheme
- Identifying opportunities for innovation
- Satisfactory completion status confirmed
